

Rushang Shah

Software Engineer · Backend & Full-Stack · LLM Systems & Cloud

Fremont, CA · +1 980-319-2500 · rushang.1992@gmail.com · linkedin.com/in/rushang-shah

SUMMARY

Software engineer with a CS master's who builds and ships production systems end-to-end: REST APIs, relational data models, full-stack web applications, and the multi-agent LLM services layered on top of them. Comfortable across Python and TypeScript, designing for correctness, reliability, and reproducible behavior, and owning code from prototype through containerized deployment on Azure and GCP. Brings a dual engineering background to problems where systems thinking and real-world constraints matter.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, SQL, C/C++ (familiar)

AI / LLM: Multi-agent orchestration, single-agent design, tool/function-calling, prompt & context design, RAG pipelines, deterministic outputs, memory handling, evaluation & observability

Agent Frameworks: Google Agent Development Kit (ADK), Anthropic Claude API, MCP-style tool integrations, conversational interfaces

Backend & Data: REST API design, relational database design & modeling, schema & data migrations, multi-source data integration, full-stack web applications

Cloud & Infra: Azure (Container Apps), Google Cloud Platform, containerization, modern deployment workflows

Practices: Testing & debugging, code review, incremental delivery, monitoring & observability, controlled rollouts, cross-functional collaboration

PROFESSIONAL EXPERIENCE

Technical Solutions Engineer

2023 – Present

Western Allied Mechanical | Menlo Park, CA

Multi-Agent Proposal Generator — *Anthropic Claude API · Google ADK · Azure Container Apps*

- **Accelerated proposal turnaround by 8x** (slashing process time from ~2 hours to ~15 minutes) by designing and building an end-to-end multi-agent generative AI system for proposal documents, summaries, and scopes of work.
- **Eliminated LLM output drift and hallucination risks** across production runs by architecting an orchestration layer featuring scoped tool-calling and strict determinism controls.
- **Achieved seamless cloud scalability and zero-downtime execution** by building the core service in Python with Google's Agent Development Kit (ADK), containerizing the environment, and deploying it via Azure Container Apps.

Internal Data Platform & AI Adoption

- Own a full-stack internal platform from architecture to deployment—designing the relational schema and REST APIs that consolidate previously siloed project-management tools into a single source of truth.
- Architect and operate services across Azure and GCP, owning data modeling, security, and deployment for systems used across the organization.
- Evaluate models and frameworks, prototype quickly, and translate successful experiments into durable, maintainable, production-ready software.

Design Engineer

2018 – 2021

Western Allied Mechanical | Menlo Park, CA

- Designed complex HVAC systems and translated customer requirements into technical specifications, owning projects from design through implementation.
- Collaborated across engineering and operations teams—building the systems thinking and requirements-translation skills now applied to software and platform engineering.

EDUCATION

M.S., Computer Science & Engineering — Santa Clara University

2021 – 2023

M.S., Mechanical Engineering — University of North Carolina at Charlotte

2016 – 2018
